

Introduction to [Mars Space Construction, LLC](#) with offices in London, UK and Texas, US.

Our company, [Mars Space Construction, LLC](#) has been formed to specifically to build a colony on Mars. It is providing [Engineering](#), [Design](#), [Fabrication](#), [Construction](#), Operations and Maintenance services to multiple locations in space with focus on Mars.

Our first project on Mars is to build a Refinery and Tank Farm to refuel the fleet of Starships as they land. We are in the [engineering](#) and [design](#) phases now and need information specific to refueling requirements of Starship. Examples are: Starship tank farm in Boca Chica operating conditions, temperature, pressure, flow rates, hose fitting size & type, storage tank volumes, processes required to go for gas to liquid state for oxygen & methane, volume of fuel stored on Starship.

If you know any SpaceX employee share this email with them and they can pass it on to someone in SpaceX engineering or to a representative of SpaceX or Elon himself. Once he reads this he will see how important it is that someone contact me.

Thank you for your time and support. If there is anything we can work together on let us know.
